Second Cyber Security Summit for German business to be held in Bonn

- Cyber Security Summit on November 11, 2013
 - The Munich Security Conference and Deutsche Telekom invites top managers and high-ranking politicians to exchange thoughts and ideas
-

The second Cyber Security Summit will be held on November 11, 2013 in Bonn as a continuation of talks between top managers and high-ranking politicians begun at the summit in the fall of 2012. The invitation comes at a time of popular discussion of confidence in the digital society – shaken to the core by the current controversy surrounding security services' eavesdropping programs. To date, cyber attacks have mostly been criminally motivated and aimed at harming the business interests of individual companies and Germany as a whole.

"We have to pick up the speed and establish a common framework for sturdy measures and define responsibilities for a coordinated defense and a transparent exchange of information," said the Chairman of the Munich Security Conference, Ambassador Wolfgang Ischinger. "Governments, business and users have to take responsibility for the security of the Internet at national and international level and create an online environment where mutual trust can grow."

"The threat from cyber attacks has become more and more acute from one year to the next. The number of attacks rose by a further 100 percent in the last 12 months. We are seeing a whole new dimension, which brings us to the

debate about security and freedom on the Internet," said René Obermann, Chairman of the Board of Management of Deutsche Telekom. The focus of the Cyber Security Summit this year is therefore on espionage and sabotage, the regulatory framework at national and international level, and specific security solutions.

The Munich Security Conference and Deutsche Telekom staged the new format of the security conference last year for the first time. Over 70 top managers and high-ranking politicians accepted invitations from the city of Bonn to exchange thoughts and ideas about the dangers to business, politics and society and to pave the way for a networked digital defense.

The Munich Security Conference has developed into one of the most important foreign policy and security policy forums in the world over the past five decades. The dangers have continuously changed in that time and now call for new ways of thinking and acting in business, politics and society in the face of the threat from the cyber world. The Munich Security Conference and Deutsche Telekom AG want to send out an important signal at the Cyber Security Summit and raise awareness for cyber security.

About Deutsche Telekom

Deutsche Telekom is one of the world's leading integrated telecommunications companies with 133 million mobile customers, 32 million fixed-network lines and over 17 million broadband lines (as of March 31, 2013). The Group provides fixed-network, mobile communications, Internet and IPTV products and services for consumers, and ICT solutions for business and corporate customers. Deutsche Telekom is present in some 50 countries and has 230,000 employees worldwide. The Group generated revenue of EUR 58.2 billion in the 2012 financial year – over half of it outside Germany (as of December 31, 2012).

About T-Systems

Drawing on a global infrastructure of data centers and networks, T-Systems operates information and communication technology (ICT) systems for multinational corporations and public sector institutions. On this basis, Deutsche Telekom's corporate customer arm provides integrated solutions for the networked future of business and society. Some 52,700 employees at T-Systems combine industry expertise with ICT innovations to add significant value to customers' core business all over the world. The corporate customers unit generated revenue of around EUR 10 billion in the 2012 financial year.
